

OCEANZ FABRIC COVERS

OCEANZ FABRIC COVERS

Oceanz Fabric Covers are manufactured using the highest quality materials and workmanship. We take great pride in designing and manufacturing our covers in the United States with these integrated industry leading features:

RIB ENDCAP & POCKET

To prevent umbrella cover failure caused by rib penetration under extreme weather conditions, our umbrellas offer an integrated pocket design system. The rib endcap, exclusive to Oceanz, diffuses the load pressure during high wind conditions, significantly reducing failures.

RAISED WIND VENTS

The raised wind vent feature is exclusive to Oceanz umbrellas and serves two purposes. First, it allows greater air flow to pass through the canopy, increasing durability in gusty winds. Second, the raised vent feature allows hot air to escape with little or no wind movement creating a cooler setting for your comfort.

FABRIC SEAMS

All Oceanz Marine Grade umbrella covers are sewn with Marine Grade UV stabilized 138mm threading. A two-stitch process is used during manufacturing including a "top stitch" that creates a 3-layer seam joint, resulting in increased strength of all seams.

FABRIC ENDS

All exposed ends are manufactured with a self-edging face which reduces frayed ends, thus extending the life of the umbrella fabric cover.

OCEANZ FABRIC COVER OPTIONS

Oceanz also offers the addition of a Double Vent or a Valance to make your umbrella even more unique and stylish.

DOUBLE VENT

The double vent adds style and functionality to the umbrella fabric cover. The additional vent promotes an increase in air flow to maximize the outpouring of hot air through the top.

VALANCE

Oceanz has specially designed the valance on our fabric covers. The valance is not a separate piece sewn on and susceptible to tearing, but rather an extension of the cover itself.
