

THE REEF UMBRELLA

At Oceans, we strive to provide superior umbrellas with solid, well engineered components. We take pride in our exclusive features which improve the strength and ease of use of every product. Our umbrellas are hand built, inspected and tested in the United States. We are committed to customer satisfaction and stand by our product in the marketplace.

REEF

1 MAIN HUB & CONNECTORS

The large center hubs are designed with 2 exclusive features: elongated hub handle and channel locking points. The elongated hub handle assists the user with opening and closing while adding stability to the umbrella structure. The channel locking points increase strength at this critical point while allowing ease of replacement.

2 RIB ENDCAP & POCKET

To prevent umbrella cover failure caused by rib penetration under extreme weather conditions, our umbrellas offer an integrated pocket design system. The rib endcap, exclusive to Oceans, diffuses the load pressure during high wind conditions, significantly reducing failures.

3 SECURE STOPS (highlighted area)

A feature exclusive to Oceans, is integrated secure stops. These stops prevent the ribs from shutting completely making this model easier to open after being in a stored position.

4 CENTER RIB CONNECTOR

The center rib and eyelet connections are designed to allow the umbrella ribs to flex further in harsh weather conditions while maintaining their structural integrity.

5 RAISED WIND VENTS

The raised wind vent feature is exclusive to Oceans umbrellas and serves two purposes. First, it allows greater air flow to pass through the canopy, increasing durability in gusty winds. Second, the raised vent feature allows hot air to escape with little or no wind movement creating a cooler setting for your comfort.

6 POLE & RIBS

The Reef's fiberglass composite pole and ribs have a significantly greater strength-to-weight ratio than competitive materials. This enhances the umbrella's long-term strength and appearance, particularly in salt water or corrosive environment.

THE REEF UMBRELLA

experience a Lifetime of quality

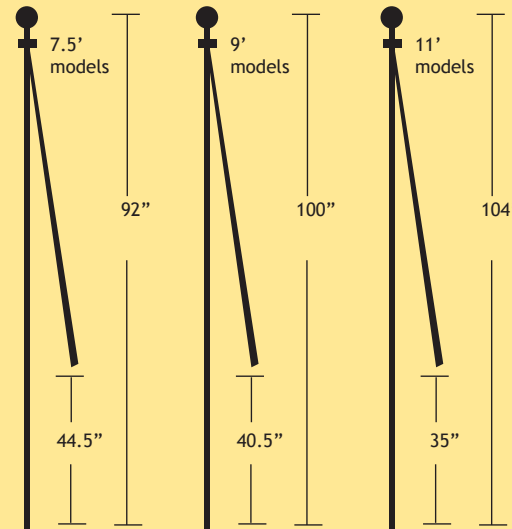

Oceanz has created the Reef umbrella line, an elegant umbrella design that features the comfort and convenience you expect from a premium umbrella. Our Reef umbrella will maintain its strength and stability in even the harshest of environments. All of the components developed for this line have been chosen for their proven resilience to extreme conditions while offering ease of use and low maintenance.
